## TWITTER SCRAPPER

The Web scrapper feature functions on the principle of data mining, scraping or data extraction. This Web Scraper, Web Harvester or Web Data Extractor allows you to retrieve Tweets amounting in the range of 1-2000. The extracted tweets will be aging from the range given. Enter the keyword on which you want to scrap the tweets. This feature acquires the username, user-followers, tweet text, location, retweet-count, hashtags, user-id etc of the twitterati and consolidate them in a single csv file, with respect to the particular word, topic, hashtag you have entered. That's it now you

have several tweets synthesized into a single file on your desired topic without taking long.

## HOW SCRAPER WORKS?

Search the top trending topics on the twitter with a start and ending date of your choice and how many tweets you want to scrape in the range of 1-2000 but as the number of tweet increases the computation also increases and it will take more time to scrape the data.
